

The Greatest Paper Airplane in the World

Taken from the book *The Dangerous Book For Boys* (Canadian Edition) by Conn & Hal Iggulden

The Harrier

This plane works well at slow launch speeds and will glide for long distances. Play with the flaps to make it turn in the air. The more carefully you fold the better the flight.

1. Make a center crease lengthwise
2. Fold the two top corners into the center forming a triangle
3. Fold it down so that it's in a shape of an envelope
4. Fold the top corners down again into a triangular shape
5. Fold the tip up
6. Fold it in half
7. Finally fold the wings back on themselves. Find the halfway line carefully
